Foxboro Pneumatic Transmitters are the industry standard.

All of these instruments have been field proven through years of experience. They are precise, easy to maintain, and available in a wide range of materials.

The Foxboro line encompasses a variety of measurement types.

Flow Measurement

Differential pressure transmitters.

Temperature Measurement

Filled thermal systems and thermocouple/ RTD devices.

Pressure Measurement

Force balance and indicating transmitters.

Liquid Level Measurement

Differential pressure transmitters with or without chemical seals and buoyancy transmitters.

Other Applications

Sanitary designs, relative humidity transmitters, speed transmitters, and repeaters.

Foxboro is the leading single source of pneumatic transmitters for the process industries.

No other manufacturer makes as many types for as many applications.

Primary Measurement Elements (Thermowells and DEWCCEL)

THERMOWELLS AND DEWCCEL

Foxboro Thermowells separate the temperature measuring sensitive portion of an RTD, Thermocouple, or Filled Thermal System from a potentially corrosive or damaging process media. These wells permit ready removal of the sensor without process shutdown.

Thermowells

- **Rigid material, concentricity specifications, and individual hydrostatic testing assures maximum soundness and highest quality**
- **Connections:**
 - Flanged (ANSI and ISO): Variety of sizes and pressure ratings
 - Threaded (metric and NPT): R1/2, R3/4, and R1 (1 /2, 3/4, and 1 NPT)
- **Type:**
 - Drilled construction, welded construction, plain, with lagging, sanitary, straight, tapered, restricted tip

Dew Point Measurement System – DEWCCEL

The DEWCCEL is used with RTD, thermocouple, or filled thermal system temperature measuring equipment.

- **The DEWCCEL System provides a direct reading of absolute humidity in ambient temperature between -45 and +105°C (-50 and +220°F)**

When connected to a temperature measurement device, the DEWCCEL System measures absolute humidity. By means of appropriate tables, the temperature can be converted to dew point, percent water vapor, parts per million, or other units of absolute moisture. In practice, the conversion is accomplished in recorder chart layouts, characterized amplifiers, or computer programs.
- **Accuracy:** $\pm 0.8^{\circ}\text{C}$ ($\pm 1.5^{\circ}\text{F}$) at 32°C (90°F) dew point (not including temperature sensor tolerances)
- **Dew Point Range Limits:** -45 and +60°C (-50 and +140°F)
- **Relative Humidity Limits:** 12 and 100% relative humidity
- **Pressure Rating:** Zero Pa absolute to 865 kPa gauge (zero psia to 125 psig)

Large Case Instruments

Foxboro large case instruments have been on the job for years in process plants around the world.

These versatile instruments fit a wide range of applications. There's a unit for just about every process function:

- **Recording**
- **Indicating**
- **Controlling**
- **Totalizing**
- **Transmitting**

And they are available with a selection of measurement elements:

- **Flow**
- **Pressure**
- **Humidity**
- **Temperature**
- **Servo Elements for RTDs/Thermocouples and other Electrical Inputs**

You can also choose from an extensive list of options such as electrical contacts, integrators, batch controls, pen types, control modes—and numerous other features.

Foxboro large case instruments can be field mounted on pipe stands, in panels, or on flush surfaces. And their durable housings are resistant to moisture, corrosion, and damaging environments.

Their dependability is legendary. That's why process engineers specify them time and again.

Large Case Instruments (Controllers)

40P, 40M

The 40P, 40M Series Recording and Indicating Pneumatic Controllers receive a mechanical input from an integrally mounted measuring element, compare it to a set point, and produce a pneumatic output signal.

40P, 40M Series Recording and Indicating Pneumatic Controllers

- **Precise Control**
- **Chart Records or Indication**
- **Weatherproof Construction (40P): NEMA Type 3**
- **Wide Selection of Measuring Elements**
- **Versatile Mounting: Surface, Panel, or Pipe Mounting**

Type 70 Electronic Contacts

70, MR

- Used in 40P and 40M Series Recorders, Indicators, and Controllers and 43AP Series Indicating Controllers

Rotor Units:

Single or double rotor units are available, each having 3 or 5 contact segments. One segment serves as the common or collector ring contact resulting in 2, 4, or 6 segments being available for relay actuation. Contact segments are adjustable with relation to each other by micrometer adjustment screws. This relationship is not disturbed by the contact setting mechanism.

Contact Setting Mechanism:

Each rotor unit is independently positioned to operate at desired values of measurement. A wide selection of setting mechanisms is available.

A Type 70 Electric Contact System is used to actuate external control or alarm circuits.

MR Series Receiver Gauges

MR Series Receiver Gauges accept 3 to 15 psi inputs from remotely located pneumatic transmitters. A wide variety of dials and scales is available to indicate measurements in convenient engineering units.

Panel-Mounted Pneumatic Instruments

CONSOTROL 100 is a complete family of pneumatic controllers, recorders, indicators, and auxiliary devices.

These instruments can handle the special requirements of virtually any application – from simple single control loops to interrelated multivariable systems.

Each CONSOTROL 100 unit is perfectly matched with other foxboro pneumatic instruments – including transmitters, valves, and accessories.

And they are engineered to fit into control configurations of all sizes. Together, they deliver exceptionally high system performance.

CONSOTROL 100 Instruments give you:

Bold, Readable Displays

Continuous scale indication of process variables and deviation from set point.

Separate Automatic and Manual Functions

Avoids forced shutdowns – control can be maintained in either mode.

Accurate Force Balance Control Modules

Metallic bellows, flexure-suspended balance member for precise operation.

Balanceless, Bumpless Auto/Manual Transfer

Fast, safe selection of operating mode.

Simple, Low Cost Mounting

Shelves accommodate up to ten instruments. Integral air manifold reduces piping costs. Individual air shutoff valve for each instrument.

Easy Service

Pneumatic circuit board has simple piping and connections. Components are highly accessible – all behind one sliding cover.

135 Series Manual Loading, Switching, and Bias Stations

- Selective Pneumatic Switching
- Remote Control Setting
- Manual Loading of Final Operators

135 Series Stations are complementary auxiliary units for 100 Series Control Systems.

For complete specifications, refer to General Specification Sheet GS 2B-4H2 A.

Functional Specifications

Model 135T:
Provides an accurate manually adjusted standard output signal used for remote manual control of final operators or for the remote setting of any pneumatic receiver. A manual adjusting knob regulates a stable standard output indicated on a 100 mm (4 in) vertical scale.

Model 135TG:
Performs the same function as the Model 135T (above). An additional pointer is provided to display a standard input signal.

Model 135TG2:
Performs the same function as the Model 135T. Two additional pointers are provided to display standard input signals.

Model 135S:
Passes a standard input signal to a final operator or manually generates an accurate standard signal. It is normally used in control loops where a single master controller regulates two or more final operators. The station contains a vertical scale, indicating the input signal and the output of the manual generator. By matching the two indicators on the vertical scale and flipping the simple 2-position transfer switch, a bumpless transfer is ensured.

Model 135SG:
Performs the same function as the Model 135S (above). An additional pointer is provided to display a standard input signal.

Model 135B:
Performs the same functions as the Model 135S with the added feature that up to $\pm 100\%$ bias may be manually added to the standard input signal. It is normally used where a single master controller regulates two or more final operators, or where it remotely sets two or more controllers, and where it is necessary to bias one with respect to the other. This unit has three pointers. One is used to indicate the manually generated signal and the other two indicate the input signal before and after it is biased.

Ambient Temperature Limits:
-20 and +65°C (0 and 150°F).

Panel-Mounted Pneumatic Instruments (Miscellaneous)

130MD, 130PD, 130FD, 138, 130M-N, 102, 101, 120

130MD, 130PD & 130FD Series Pneumatic CONSOTROL Control Stations

130MD, 130PD, and 130FD Series Pneumatic CONSOTROL Control Stations provide Panel-Mounted measurement, set point, and auto/ manual transfer functions to operate separately mounted controllers. The stations are used with the 138 Series Controllers to minimize time lag resulting from long distances between control panels and the process.

138 Series Remote Mounted Pneumatic Controllers

138 Series Remote Mounted Pneumatic Controllers are used with 130MD, 130PD, and 130FD Series Control Stations. They provide the response advantage of a local controller with the convenience of a Panel-Mounted display.

130M-N Series Pneumatic CONSOTROL Indicating Gap Controllers

The Model 130M-N7 Differential Gap Controller is an on/off unit with an adjustable inert zone (gap) within which the controller will not respond to changes in the measurement.

The Model 130M-N94 Gap Action Floating Controller provides standard proportional plus integral control action when the measurement exceeds the high or low gap limit.

102 & 101 Series Pneumatic CONSOTROL Shelves

102 and 101 Series Pneumatic CONSOTROL Shelves allow flush panel mounting of pneumatic CONSOTROL instruments in panels. They are compact units, available in ten sizes for one to ten instruments. The shelves allow instruments to be wholly or partially withdrawn without interfering with the operation of others.

120 Series Pneumatic CONSOTROL Recorders

120 Series Pneumatic CONSOTROL Recorders record up to four process measurements received as standard pneumatic transmission signals from remote transmitters. Large, brightly colored pens clearly indicate the measurement. The recording is on a SCAN-FOLD chart.

Alarm Actuators and Alarm Lamps

100 Series Pneumatic Alarm Actuators are available integrally mounted in CONSOTROL 100 instruments. The actuators are operated directly by the pneumatic input signals. They provide high sensitivity, accuracy, and dependability by eliminating intermediate receiver mechanisms. A wide variety of alarm configurations is available.

Converters

Many processes require both electronic and pneumatic instrumentation. Converters allow you to integrate that combination into your control strategy.

Foxboro makes converters for both purposes:

CURRENT-TO-PNEUMATIC (I/P) E69 SERIES

- Available with a selection of input/output signals
- Small, compact, lightweight—for easy installation
- High air delivery rate for direct valve actuation

CURRENT-TO-PNEUMATIC (I/P) IP24 SERIES

Control Valves (Actuators)

2A, P SERIES, 20F/P50, 30C/P110

2A Series Cylinder Actuator with Power Positioner

The 2A Series Cylinders are used to actuate dampers, gates, shutters, doors, and large control valves. Power positioners are required with all pneumatic cylinders for throttling action. They convert the standard 20 to 100 kPa (3 to 15 psi) controller signal to full supply pressure on the cylinder piston and assure precise, positive positioning. Cylinders are available in bore sizes 83 through 355 mm (3 1/4 through 14 in) with strokes up to 810 mm (32 in).

E69P Series Current-To-Pneumatic Valve Positioners

The E69P Series Current-to-Pneumatic valve Positioner converts a direct current milliampere input signal into a pneumatic output signal for positioning control valve actuators. It eliminates the need for a separate converter and a separate positioner. It is available with the following input signal ranges (mA): 4 to 20, 4 to 12, 12 to 20, 10 to 50, 10 to 30, 30 to 50 with a corresponding output signal of up to 240 or 420 dPa (35 or 60 psi, 2.4 or 4.2 bar or kg/cm²).

Models 20F/P50 & 30C/P110 Diaphragm Lever Actuators

The Models 20F/P50 and 30C/P110 Diaphragm Lever Actuators are used to actuate dampers, gates, and butterfly valves. The topworks of the size P50 and P110 Diaphragm Actuators are made of vinylcoated, die-cast aluminum. Maximum input pressure is 420 kPa (60 psi). Bracket material is cast iron, and the carbon steel lever is predrilled. Lever strokes range from 116 to 254 mm (4.56 to 10 in).

P Series Pneumatic Spring Diaphragm Actuators

The P Series Actuators can operate a variety of control valves, dampers, louvers, and gates. They are lightweight field-reversible units with low hysteresis and fast, precise response.

Model	Maximum Stroke		Effective Area		Material Construction
	mm	in	m²	in²	
P25	19	3/4	0.016	25	aluminum
P50	38	1 1/2	0.032	50	with cast
P110	57	2 1/4	0.071	110	iron yoke

Nominal input signal: 20 to 100 or 40 to 200 kPa (3to 15 or 6 to 30 psi).

Humitex Circular and Strip Charts

Foxboro recording charts complement the precision and fine craftsmanship of our wide range of recording instruments. Charts combine the essential elements of special high-quality paper with rigidly controlled printing and trimming procedures. Over 17,000 different charts can be supplied in ranges and calibrations to meet the requirements of practically any process recording application. Special charts and new ranges not listed in the Chart Catalog and Dial List (Catalog 600) may require a new electro printing plate for specific customer needs. Contact our nearest Branch Office for Catalog 600.

Chart Purchase Agreement

Any Foxboro instrument user with an estimated yearly requirement of 500 boxes of circular and/or 500 boxes of strip charts or more may request a Chart Purchase Agreement. Under the agreement system, quantity prices are applied to the individual chart purchase order. The agreement is continuous, reviewed yearly for actual purchases, and a 30-day advance notice to changes is given. Refer to Foxboro with your annual requirements to receive a Chart Purchase Agreement.

Minimum Order Quantity—15 boxes of circular charts or 15 boxes of strip charts.
