CONVERSION TABLE FOR PRESSURE UNITS	46
INQUIRY CHECKLISTE FOR PRESSURE SWITCHES	47

DEFINITION OF PRESSURE

A force applied uniformly over a certain area is called **pressure**:

$$p = F / A$$

(pressure = force / area)

Pressure (P) besides temperature is one of the most frequently measured physical units. The unit „Pascal“ (Pa) is the SI unit of pressure within the metric unit system. In Europe „bar“ is the most commonly used (SI) unit. It roughly equals with the magnitude of the atmospheric pressure.

$$1 \text{ bar} = 0,1 \text{ MPa} = 0,1 \text{ N/m}^2 = 10^5 \text{ Pa}$$

Particularly in the anglo-american influenced region „psi“ (pounds per square inch) is the most common unit.

The general term „pressure“ is not always very clear:

In technical usage several types of pressure are differentiated, mainly differences between two pressure points, which in general linguistic usage all are called pressure.

To avoid confusion, the various types of pressure are distinguished according to their point of reference:

Absolute Pressure (P_{abs})

Absolute pressure always refers to the absolute vacuum, i.e. the zero-point is the absolute vacuum.

A pressure gauge with measuring range 0 - 10 bar absolute shows the current ambient pressure (P_{amb}) when in nonoperating state/not installed.

Ambient Pressure (P_{amb})

The atmospheric pressure is the ambient pressure.

Atmospheric Pressure Difference (P_e)

The atmospheric pressure difference, also called positive pressure (P_{e+}) respectively negative pressure (P_{e-}) is the most commonly measured type of pressure in the technical field.

It refers to atmospheric pressure (P_{amb}) and is the difference between the atmospheric pressure (P_{amb}) and absolute pressure (P_{abs}).

$$P_e = P_{abs} - P_{amb}$$

P_e becomes positive when the absolute pressure is higher than the atmospheric pressure; P_e becomes negative when the absolute pressure is lower than the atmospheric pressure.

A pressure gauge with measuring range 0 - 10 bar relative shows 0 bar when in nonoperating state/not installed.

Differential Pressure (DP)

Differential pressure is the pressure difference (ΔP) between two measured pressures (P₁, P₂).

$$\Delta P = P_1 - P_2$$

Differential pressure instruments are universal, as they can be used to as a relative pressure instrument or for **hydrostatic level measurement**.

WHAT IS A PRESSURE SWITCH ?

Pressure switches are signal elements, that can be used for measuring pressure in pressure lines for gases, vapours or liquids.

In general pressure switches have one or more fixed or adjustable switching contacts.

Each switching contact has a **setpoint** (• **SP**). This setpoint corresponds to a pressure value setted on the pressure switch.

When rising above or falling below this value the switching contact within the pressure switch is triggered.

Due to inaccuracy the **re-set point** (• **BSP**) does not exactly match the setpoint. The difference between setpoint and re-setpoint is called hysteresis or **switching differential** (↕ **SD**)

control and regulation of processes, e.g. safety and alarm devices.

WHAT IS A MANOCOMB® PRESSURE SWITCH ? Not only a pressure switch!

The MANOCOMB® pressure switch is a modular precision pressure instrument based on a force-balance measuring system, that actuates either one or two switching contacts.

These switching contacts can be comfortably adjusted on a calibrated set value input scale (class 1.0). To protect adjusted setpoint from readjusting, a sealable version is available.

Optionally the MANOCOMB® precision pressure switch can be equipped with an integrated pressure gauge (actual value indicator, class 1.0) and/or integrated pressure transducer (analogue signal 4 - 20 mA or 0 - 10 V, 0,5% FS) inside the same housing.

Based on the modular system an enormous number of housing types, switching contact types, pressure, diffe-

rential pressure and vacuum ranges, process connections and electrical / pneumatic connections is available.

This great variety qualifies the MANOCOMB® precision pressure switch for all measuring points and operating conditions.

The MANOCOMB® is also suitable for critical applications, e.g. as safety pressure limiter with internal interlock. Approvals cover SIL, VdTÜV leaflet 100, Pressure Equipment Directive, Gas Appliances Directive and/or ATEX.

Discover more about the different models and options as well as its versatile utilization on the following pages.

ADVANTAGES OF MANOCOMB® PRECISION PRESSURE SWITCHES

Differences between MANOCOMB® precision pressure switches and conventional pressure switches:

- high precision and extremely robust force-balance measuring system with bellows and calibrated spring. Without moving axes, turning motions, rotations, hinges or pistons the measuring systems works completely friction free!
- the measuring system is mounted free of tension or torsion in the housing!
- each switch contact has its own measurement system!
- very comfortable switching point adjustment with calibrated reference scale (class 1.0) without tools or reference instruments!
- large selection of switching contacts, for example micro switches, inductive contacts, air cutting contacts, pneumatic valves!
- optionally integrated pressure gauge (class 1.0)!
- optionally integrated pressure transmitter (analogue signal 4 - 20 mA or 0 - 10 V, 0.5% FS)!

Technical advantages of MANOCOMB® precision pressure switches ?

- The measuring system has no parts subject to wear and tear and is exceptionally precise:
 hysteresis: depending on contact approx. 0,5 - 3,5%
 repeatability: depending on contact approx. 0,03%
- virtually unlimited life span!
- insensitive to pressure surges, shock and vibration!
- the adjusted switching point is not affected by body tension!
- High accuracy. Each contact is adjustable independently over the entire measuring range (0 - 100%) and does not interfere with the other!

- For adjusting the switch point no reference instrument is needed. Settings can be comfortably made on-site without affecting safety. Adjusted values can be clearly read from the setpoint scale and compared to the actual pressure value!
- Large selection of switch contacts to optimize the control/switching performance, eg high switching capacity, intrinsically safe circuit, pneumatic output signal!
- Simplified installation arrangements by integrated instruments!

Economical advantages of MANOCOMB® precision pressure switches ?

- Lowest losses in uptime due to highly accurate set point adjustment!
- Compact design with small dimensions and simplified installation arrangements by integrating other instruments!
- Proven design without mechanical stress: you do not need any wear parts or spare parts!
- Exact reproducibility and long term stability, which saves you a lot of maintenance hours per year and corrections to the setting!

Which approvals features the MANOCOMB® precision on pressure switch? (depending on model)

SIL	Safety Integrity Level (IEC 61508/61511) SIL 2 and SIL 3*

GOST	GOST-R certification proof of conformity with Russian quality standards and regulations

Force-balance measuring system

An adjustable tension or stress spring provides the set point.

The process pressure (actual value) acts on the bellow.

Once the actual value opposes the set point adjustment, force-balance-principle, a friction-free mounted lever triggers an electric or pneumatic switching contact.

Force-balance measuring system (ΔP)

An adjustable tension or stress spring provides the set point.

Two bellows working against each other build the differential pressure ΔP (actual differential value) from two process pressures (actual value).

Once the actual differential value opposes the set point adjustment, force-balance-principle, a friction-free double-lever triggers an electric or pneumatic switching contact.

MANOCOMB® Precision Pressure Switch Model IP65

- friction-free force-balance measuring system
- very high repeatability
- extraordinary long-term stability
- measuring ranges from -1... 0 bar up to 0 - 400 bar
- comfortable setpoint adjustment on calibrated scale
- **optionally integrated pressure gauge**
- **approved as Pressure Monitor / Pressure Limiter**

Description

The MANOCOMB®-IP65 is a precision pressure switch for measuring pressure, differential pressure and vacuum of gaseous or liquid, also aggressive, chrystallizing and highly viscous media.

Operating Principal

The operation is based on force-balance - per change-over contact a metal bellow is available, which is opposed by a precision spring with an adjustable force.

Once the process pressure overcomes the set force the change-over is triggered.

The contact adjustment is done by removing the cover and turning the thumb wheel to the desired set point.

The set point adjustment can be comfortably read from the set point scale. No reference instrument is needed.

The measuring system, which actuates the switching contact works friction-free, resulting in minimal wear. No maintenance or spare parts are needed!

Integrated Pressure Gauge

The optionally integrated pressure gauge (class 1.0) visualizes the actual process pressure right next to the set point indicator.

PRESSURE LIMITER

External interlock

When used as a pressure limiter acc. to Vd-TÜV leaflet Pressure 100/1 the switch condition must be locked once the the pressure rises beyond the adjusted setpoint.

Before unlocking the interlock the reason for the pressure rise must be clarified and corrected.

Recommendations for an external interlock in a control cabinet or PLC:

interlock on rising pressure

interlock on falling pressure

PRESSURE LIMITER

Internal interlock

Pressure limiters with internal interlock feature an integrated interlock.

With a manual reset on the device the interlock is re-opened

An external interlock is not necessary.

For pressure limiters with internal interlock please see MANOCOMB-IP65/CV on page 22.

EXAMPLE CONFIGURATIONS

MANOCOMB® Precision Pressure Switch Model IP65/CV

- friction-free force-balance measuring system
- very high repeatability
- extraordinary long-term stability
- measuring ranges from -1... 0 bar up to 0 - 400 bar
- comfortable setpoint adjustment on calibrated scale
- **approved as Pressure Monitor / Pressure Limiter**
- **internal interlock of switch state**
- **for LOW or HIGH pressure or combined**
- **manual reset or tool reset or combined**

Description

The MANOCOMB®-IP65 is a precision pressure switch for measuring pressure, differential pressure and vacuum of gaseous or liquid, also aggressive, crystallizing and highly viscous media.

Operating Principal

The operation is based on force-balance - per change-over contact a metal bellows is available, which is opposed by a precision spring with an adjustable force.

Once the process pressure overcomes the set force the change-over is triggered.

The contact adjustment is done by removing the cover and turning the thumb wheel to the desired set point.

The set point adjustment can be comfortably read from the set point scale. No reference instrument is needed.

The measuring system, which actuates the switching contact works friction-free, resulting in minimal wear. No maintenance or spare parts are needed!

Integrated Pressure Gauge

The optionally integrated pressure gauge (class 1.0) visualizes the actual process pressure right next to the set point indicator.

MANOCOMB® Precision Pressure Switch Model IP65/XI

- friction-free force-balance measuring system
- very high repeatability
- extraordinary long-term stability
- measuring ranges from -1... 0 bar up to 0 - 400 bar
- comfortable setpoint adjustment on calibrated scale
- **optionally integrated pressure gauge**
- **approved as Pressure Monitor / Pressure Limiter**
- **for hazardous area (Exi)**

Description

The MANOCOMB®-IP65/XI is a precision pressure switch for measuring pressure, differential pressure and vacuum of gaseous or liquid, also crystallizing and highly viscous media. Especially for hazardous area.

Operating Principal

The operation is based on force-balance - per change-over contact a metal bellow is available, which is opposed by a precision spring with an adjustable force.

Once the process pressure overcomes the set force the change-over is triggered.

The contact adjustment is done by removing the cover and turning the thumb wheel to the desired set point.

The set point adjustment can be comfortably read from the set point scale. No reference instrument is needed.

The measuring system, which actuates the switching contact works friction-free, resulting in minimal wear. No maintenance or spare parts are needed!

Integrated Pressure Gauge

The optionally integrated pressure gauge (class 1.0) visualizes the actual process pressure right next to the set point indicator.

Terminal Blocks

¹ standard wiring - customer specific wiring on request

SWITCH AMPLIFIER

The pressure signal is evaluated via a micro switch (simple electrical aperature) which must be connected to an approved intrinsically safe circuit of an associated electrical equipment, e.g. switch amplifier.

Please contact our sales team for recommended switch amplifiers.

PRESSURE LIMITER

External interlock

When used as a pressure limiter acc. to Vd-TÜV leaflet Pressure 100/1 the switch condition must be locked once the the pressure rises beyond the adjusted setpoint.

Before unlocking the interlock the reason for the pressure rise must be clarified and corrected. Please contact our sales team for recommended external interlock.

PRESSURE LIMITER

Internal interlock

Pressure limiters with internal interlock feature an integrated interlock.

With a manual reset on the device the interlock is re-opened

An external interlock is not necessary.

For pressure limiters with internal interlock please see MANOCOMB-IP65/CV on page 16.

- very high repeatability
- extraordinary long-term stability
- measuring ranges from -1... 0 bar up to 0 - 400 bar
- comfortable setpoint adjustment on calibrated scale
- **integrated pressure transmitter**
- **optionally integrated pressure gauge**
- **approved as Pressure Monitor / Pressure Limiter**

Description

The MANOCOMB®-TM is a precision pressure switch for measuring pressure, differential pressure and vacuum of gaseous or liquid, also aggressive, crystallizing and highly viscous media.

Operating Principal

The operation is based on force-balance - per change-over contact a metal bellows is available, which is opposed by a precision spring with an adjustable force.

Once the process pressure overcomes the set force the change-over is triggered.

The contact adjustment is done by removing the cover and turning the thumb wheel to the desired set point.

The set point adjustment can be comfortably read from the set point scale. No reference instrument is needed.

The measuring system, which actuates the switching contact works friction-free, resulting in minimal wear. No maintenance or spare parts are needed!

Integrated Pressure Transmitter / Integrated Pressure Gauge

The integrated pressure transmitter (0,5% FS) delivers a continuous output signal (4 - 20 mA or 0 - 10V).

The optionally integrated pressure gauge (class 1.0) visualizes the actual process pressure right next to the set point indicator.

PRESSURE LIMITER

External interlock

When used as a pressure limiter acc. to Vd-TÜV leaflet Pressure 100/1 the switch condition must be locked once the the pressure rises beyond the adjusted setpoint.

Before unlocking the interlock the reason for the pressure rise must be clarified and corrected. Please contact our sales team for recommended external interlock.

PRESSURE LIMITER

Internal interlock

Pressure limiters with internal interlock feature an integrated interlock.

With a manual reset on the device the interlock is re-opened

An external interlock is not necessary.

For pressure limiters with internal interlock please see MANOCOMB-IP65/CV on page 16.

MANOCOMB with pneumatic switch contacts

special design for 3-way redundant monitoring

Special version of the MANOCOMB® pressure switch as the maximum pressure limiter with pneumatic switch contacts for safety valve control devices.

These control devices are used to control spring-loaded safety valves with a pneumatic drive for loading and lifting air.

The controller operates according to the principle of quiescent with the external medium air. The associated safety valves operate on the principle of relief.

Safety valves are used to protect the system against excessive pressure by a very large discharge capacity and controlled opening in the sliding operation; in power plant operation as well as for processes in the chemical and petrochemical industry.

For more information about this design, please contact our sales team.

MANOCOMB-IP65/PN

MIN and MAX monitoring of the process pressure

MANOCOMB® pressure switches in pneumatic version for monitoring of MIN and MAX switching points in pneumatic „safety device for natural gas production“

The MIN and MAX switching points are adjustable from 0 to 160 bar and monitor the stable supply of the gas pipeline. The built-in pressure gauge shows the current process pressure.

For additional security, a second MANOCOMB® pressure switch both indicates and monitors the control air supply.

Read more about this version and the safety equipment in our ENGINEERING REPORT „safety device for natural gas production“ or contact our sales team.

INQUIRY CHECKLIST PRESSURE SWITCHES (BY FAX TO +49-6262-92670-99)

Company's name and address	contact person
	telephone, fax
inquiry no. / project no.	E-Mail
application	measured media
wetted parts material	housing material
media temperature T_{min} T_{max}	environmental temperatur T_{min} T_{max}
pressure load static: dynamic: from to	vacuum ☐ Yes ☐ No
special requirements	

Design pressure switch

model	explosion proof version ☐ No ☐ EExi ☐ EExd ☐ _____
number of switching contacts ☐ 1 ☐ 2 ☐ _____	set point(s) - falling /rising?
switching contact type ☐ micro switch ☐ inductive ☐ pneumatic	switching performance (mech. and electr. for micro switch)
actual value indicator (integrated pressure gauge) ☐ Yes ☐ No	analogue signal (integrated pressure transducer 4 - 20mA) ☐ Yes ☐ No
pressure range	differential pressure range
process connection ☐ BSP ☐ NPT ☐ chemical seal see checkliste chemical seal ☐ others ☐ 1/4 ☐ 1/2 ☐ male ☐ female	
electrical connection ☐ M20/terminal blocks ☐ wired cable _____ meter ☐ others ☐ plug ISO4400 ☐ Harting plug	
approvals / certificates	
other	
Quotation for pieces _____ ☐ annual demand ☐ single demand ☐ project demand ☐ spare parts	

Distributore esclusivo per l'Italia
DELTA STRUMENTI S.r.l
